display when needed

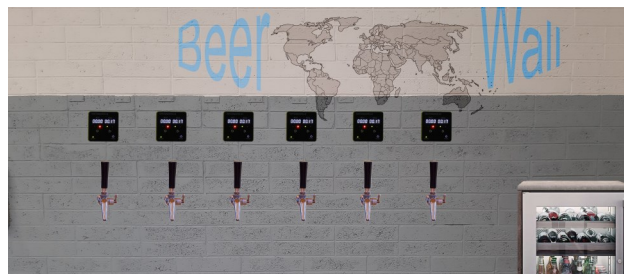

Green light Indicates Keg in use

Red light Indicates Keg empty

1. Begin dispensing beer
2. When beer keg is empty **Red** light on display unit will indicate so.
3. Ensure the beer tap is put back to the **off position** while changing keg otherwise foam will enter beer line.
4. **Red** light on display unit will indicate keg is empty and **green** light will indicate that keg is in use and beer used will register on display unit.
5. Digital Display Unit will indicate usage of beer from keg; therefore, bar person will be aware when keg is near to change.
6. To shut down the display unit hold finger on power button for 3 seconds. when digital unit is switched on again, it's built in memory will revert it back to its previous reading and take up where it left off in beer usage from keg.
7. To reset the flow value to zero on the chosen keg,  hold button down for 3 seconds on digital display.

REV. 1

- Use competent installer.
- Use appropriate connections & tubes.
